

Spring 2010 WI SAF Science and Technology Report

*The Forest Science and Technology Board has made statistics and statistical interpretation a point of emphasis this year. Look for a couple of applied sessions at this fall's National Convention geared toward this topic. Also see the following webpage, entitled "A Series on Statistics and Science", featuring volunteer submissions on some topics (more entries to be added throughout the year):

http://207.5.76.244/fp/statistics_and_science.cfm

*The Dictionary of Forestry is online using the link to the right at this page:

<http://www.safnet.org/education/index.cfm>

use of official definitions and terms might help all when working with individuals/media.

* The Science Fund is operational with information available at this link:

http://www.safnet.org/workinggroups/science_fund.cfm

A couple of State Societies are contributing a portion of monies typically earmarked to the Forester's Fund to the Science Fund to help raise its principal, still extremely small in relation to the Forester's Fund.

*The Journal of Forestry should soon be featuring Science in Action articles – which apply current scientific information to natural resource issues.

Respectfully submitted,

Paul Doruska, WI SAF Science and Technology
